

Free Program : Certificate Course In Fire Safety

Program Overview

Fire and Safety training is gaining popularity with each passing year. This sector is generating numerous job opportunities. Fire and Safety courses are also popularly known as Fire and Safety Technology / Fire and Safety Management. Despite their different names, these courses share the same training module and content. Fire and Safety courses focus on the science of fire and fire fighting. The training module covers topics such as fire, fire prevention, hydraulics, first-aid, fire fighting equipment, communication systems, fire safety engineering, chemistry and physics.

Benefits of the Program

There's a misconception that fire and safety professionals are hired only by fire brigades and firefighting departments. Actually, fire and safety professionals are also hired by chemical plants, industries, MNCs, Oil companies, refineries, electricity boards and construction firms. Candidate is examined at the end of each module and credit score is generated which is aggregated to all the 12 modules average. Based on this Certificates are awarded as A+, A ,B and C category. All students are given free counseling and guidance on job market and potential employers.
